To whom it may concern :

Re: Eric M. Ambriza

In September 2015, Vodacom Mozambique appointed Eric Ambriza as Billing Applications Coordinator. Eric Ambriza's performance led to his promotion as Billing Applications Specialist early 2017. Since then Eric, has been consistently performing at high standards, and specially looking at the team's standards in terms of communication, cooperation and commitment.

As a Billing Applications collaborator, Eric is responsible for managing a system that contains applications that interact with the millions subscribers of the network. Some of the applications are:

- Self-care menu USSD application – used by subscribers to do various transactions form purchasing bundles, managing services and accounts;
- Subscriber's registration USSD applications – used by subscribers and street vendors to register in the network based on the network regulator rules;
- Recharges activation USSD application – used for dealer to activate generated recharge vouchers
- Inbound/Outbound SMS managing system – which includes SMPPs and processing subscriber's requests/responses on products/services in a Database.

Eric is also responsible for the CRM application used by Vodacom's staff to manage the subscriber's accounts.

He is also managing the billing file transfer, which is a system responsible to collect and distribute files between the various systems in the VAS and Billing Department using SFTP protocol.

Eric has conducted and delivered various projects, and he is currently seen as one of the main pillars of the Billing Applications team, being the technical lead in some of the complex projects we have in hand, where he performs requirements gaterhing, analysis and design of web services using a variety of technologies. This projects go from new products and services that interact directly with subscribers, to new functionalities on the CRM to best serve the Vodacom's staff needs on assisting and managing subscribers.

He also manage daily operational tasks, checklists and resolving in a timely matter issues that might arise on the systems.

On this activities Eric has shown technical skills in managing Java USSD applications. And Web Services, running on glassfish and payara, which serve as interface between CRM Database and various other systems. He has also developed applications by coding in Oracle PI/SQL Developer and Linux .

Eric's persistence, attention to detail, and an end-to-end understanding of the environment under his portfolio, resulted in improvements done across system integrations, database, and code development.

Eric is also the focal point of contact for IT Security, Audit and IT Governance deliverables, which was given to him as an additional challenge, and to which Eric has responded with an impressive hard work attitude.

Eric is an extremely talented, hard-working employee, always willing to listen, learn and continuously improve his knowledge as per his ability to be a fast learner, and with the right guidance and training, I have no doubt Eric will excel.

Pedro Fernandes

Executive Head Billing Applications, VAS, MIS & CVM Technology
